

# Mr. Football Dynasty Improvement Plan

Plain-English one-page status brief for the next Codex run

**Bottom line:** MFD already has a deep, playable dynasty foundation. The next wins should be small, tested slices that make existing systems clearer, safer, and more exciting instead of a giant rewrite.

## READY TO BUILD ON

**Core game:** deterministic sim, week advance, saves, setup, roster, draft, trades, cap, free agency.

**World depth:** Chip, media, weather, awards, HOF, records, legacy, player profiles, rivalries.

**Guardrails:** many tests protect routes, save version, RNG, content, CI, and shell behavior.

**Best pattern:** forecast helpers already show how to explain choices before commits.

## NEEDS WORK

**Clarity:** some screens know the data but do not explain what changed or what to do next.

**Unwired helpers:** franchise tags, coach development, poaching, rivalry sidecar, and fast-lane setup need real call sites.

**Mismatch bugs:** endorsements, scenario blockers, cap rule display, achievements, and waivers have source-truth gaps.

**Living world:** player memory, offseason calendar, team flavor, and dynasty receipts can be stronger.

## WATCH THE RISKS

**Saves:** new persistent fields need schema, migration, defaults, fixtures, and old-save tests.

**Sim math:** formula changes need samples, deterministic checks, and sanity ranges.

**Sidecars:** browser-local archives are not automatically in portable dynasty cartridges.

**Claims:** do not say a feature is live unless source shows a production path.

## Future /goal plan

|                                                                                |                                                                                         |                                                                              |                                                                                     |
|--------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|
| <b>1. Pick</b><br>Score 3-5 slices by impact, risk, testability, and rollback. | <b>2. Ship</b><br>Finish one vertical slice with source, tests, docs, and verification. | <b>3. Record</b><br>Ledger: files, tests, docs, risks, rollback, next slice. | <b>4. Continue</b><br>Move on only when the current slice is clean and independent. |
|--------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|

## Best next slices

Start with read-only clarity when possible. Strong candidates: **Waiver/practice-squad clarity; achievement and player-memory clarity; endorsement source-of-truth fix; offseason calendar checklist; cap rule-awareness display; scenario constraint integrity; team-ops receipts; weather and game-day clarity.**

Simple rule for the marathon: improve what players feel, preserve saves and deterministic sim, and update the guide after every verified slice.
